FINANCIAL REPRESSION

Crony Capitalism - Global Rebalancing - Statism

Release 1.0 Version 2.0

Through the Process of Abstraction the 2012 Thesis outlines how the Global Macro is presently on a well defined path towards a global Fiat Currency Failure and the emergence of a New World Order. 2012 will be highlighted by social unrest during a period of heightened conflict and tension. As economic growth declines and chronic unemployment becomes even more broad based on the world stage, Macro Prudential Policies of Financial Repression will accelerate. Increasing centralized planning and control by sovereign government will further push advanced societies towards collectism and statism.
